Can You Canoe?

Lesson focuses on how canoes, which have been hand built for centuries, have been impacted by engineered materials and manufacturing processes over the years. Student teams design and build a canoe frame and then cover their frame with everyday materials and test their design in a basin. Student canoes must be able to float. As an extension activity, older students may be required to develop a canoe that can hold a minimum weight. Students then evaluate the effectiveness of their canoes and those of other teams, and present their findings to the class.
