Playing With Parachutes

This lesson focuses on parachute design. Teams of students construct parachutes from everyday materials. They then test their parachutes to determine whether they can transport a metal washer to a target on the ground with the slowest possible rate of descent.

sound, and heat/thermal in everyday life.	electrical, light, and heat/thermal.	thermal, electrical, and sound energy.			direction of an object's motion.	displacement, speed and acceleration.	concepts of distance, displacement, speed, average velocity, instantaneous velocity, and acceleration.
6.B Demonstrate and observe how position and motion can be changed by pushing and pulling objects to show work being done such as swings, balls, pulleys, and wagons.	6.D Design an experiment to test the effect of force on an object such as a push or a pull, gravity, friction, or magnetism.	6.D Design an experiment that tests the effect of force on an object.	8.B Identify and describe the changes in position, direction, and speed of an object when acted upon by unbalanced forces.		6.B Differentiate between speed, velocity and acceleration.	4.B Measure and graph distance and speed as a function of time using moving toys.	4.D Calculate the effect of forces on objects including the law of inertia, the relationship between force and acceleration, and the nature of force pairs between objects.
6.C Observe forces such as magnetism and gravity acting on objects.			8.C Calculate average speed using distance and time measurements.		6.C Investigate and describe applications of Newton's law of inertia, law of force and acceleration and law of action-reaction, such as in vehicle restraints, sports activities, amusement park rides, Earth's tectonic activities, and rocket launches.	4.C Investigate how an object's motion changes only when a net force is applied, including activities and equipment such as toy cars, vehicle restraints, sports activities and classroom objects.	6.B Investigate examples of kinetic and potential energy and their transformations.
			8.D Measure and graph changes in motion.			4.D Assess the relationship between force, mass and acceleration, noting the relationship is independent of the nature of the force, using equipment such as dynamic carts, moving toys, vehicles and falling objects.	
						5.A Recognize and demonstrate that objects and substances in motion have kinetic energy such as vibration of atoms,
